Super Store Sales Analysis & Forecast Report

Based on the Power BI dashboard: Super Store Sales Dashboard and 15 Days Forecast of SuperStore Sales | Data period: January 2019 to December 2020

Super Store made $1.57M in sales and $175.26K in profit (about 11.2% margin) on 22K units, delivering in 3.93 days on average. Sales grew sharply in 2020 and peak in the last quarter, and the 15-day forecast shows steady sales with wide uncertainty.

KPI	Value
Sales	$1.57M
Quantity	22K units
Profit	$175.26K
Avg delivery	3.93 days

What sells and where

- **Categories:** Office Supplies 0.64M, Technology 0.47M, Furniture 0.45M.
- **Top sub-categories:** Phones 0.20M, Chairs 0.18M, Binders 0.17M.
- **Top states:** California 0.34M, New York 0.19M, Texas 0.12M, together about 41% of sales.
- **Customers:** Consumer 48%, Corporate 33%, Home Office 19%.
- **Habits:** Standard Class is the most used shipping (0.33M) and cash on delivery the most used payment (43%).

Trend and forecast

- 2020 beat 2019 in every month for both sales and profit, and September to December is the strongest stretch.
- Daily sales are very spiky. The 15-day forecast stays flat near recent levels with a wide band, so read it as the expected average level, not a day-by-day prediction.

What to do

- Build stock and staffing ahead of Q4.

- Protect California, New York and Texas, and test growth in Washington, Pennsylvania and Ohio.
- Bundle Phones and Chairs with related products.
- Encourage online and card payments to reduce cash-on-delivery risk.
- Test forecast accuracy on held-out days before relying on it.

Data check: the four ship mode values add up to about 0.55M, not 1.57M. Confirm whether that chart is filtered.
